No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                  ligand, DT. DT or trimers are useful in immunotherapy or treatment of cancer. DT is useful against viral diseases or infections, or as a vaccine adjuvant. It may also be used as an immunogen to produce antibodies or for screening mechods, e.g. for identifying modulators of D7-receptor interaction. Modulators are useful for immunotherapy, particularly, in treating inflammation, autoimmune disease, other diseases associated with activation of transcription factor NF-kappa-B (e.g. rheumatoid arthritis, neuronal inflammation, asthma), cancers, infections (e.g. septic shock), or atherosclerosis. The D7 gene is useful ingent therapy, and may be employed for producing the protein by recombinant techniques. D7 antibodies are useful for locating the protein in a tissue, or for purifying the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

The invention relates to an isolated antibody (I) or its portion that specifically binds to a 285 residue neutrokine-alpha protein sequence or a 250 residue APRIL (proliferation inducing) ligand) polypeptide concentrate (S2). Also included are: (1) an antibody or its portion that competitively inhibits the specific binding of (I) by at least 50 or competitively inhibits the specific binding of (I) by at least 50 or competitively inhibits the specific binding of (I) by at least 50 or competitively inhibits the specific binding of (I) by at least 50 or competitively inhibits the nucleic acid, (4) a host cell comprising the nucleic acid, (7) a vector and information for treating disease or disorder such as autoimmune diseases, systemic lupus erythematosus, rheumatoid arthritis, systemia, multiple myeloma, Hodgkin's Iymphoma and non-Hodgkin's lymphoma, an immunodeficiency, hypo or hypergammaglobulinaemia, cheumatic heart disease, disease, myasthenia gravis, autoimmune competities, syndrome, Graves' disease, myasthenia gravis, autoimmune competities, primary chemolytic anaemia, infertility, chronic active hepatitis, primary chaemolity circlesis, other disorders such as inflammatory skin diseases including psoriasis, allergic conditions, atherosclerosis, antigen-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              an
Graves' disease; myasthenia gravis; autoimmune haemolytic anaemia; infertility; chronic active hepatitis; primary biliary cirrhosis; inflammatory skin disease; psoriagis; allergy; atherosclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel antibody that binds to neutrokine-alpha protein, useful for diagnosing and treating diseases or disorders, such as autoimmune diseases, lupus erythematosus, rheumatoid arthritis, cancer, or an immunodeficiency
                                                                                                              autoimmune thrombocytopaenia; antibody; chromosome 13q34
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rosen CA, Ullrich S;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; Page 172; 203pp; English.

             antibody is also useful for diagnosing the disease or disorder, by sassaying expression of Neutrokine-alpha and APRIL expression level, in cells or body fluid of an individual and comparing the levels with a standard expression level, where an increase or decrease in the assayed Neutrokine-alpha and APRIL expression level compared to the standard expression level in indicative of a disease or disorder. The antibody is also useful for reducing or stimulating immunoglobulin production and to inhibit or stimulate proliferation of a cell of haematopoietic origin, preferably a B cell. The gene for Neutrokine-alpha is located on chromosome 13q34. The present sequence is a non-human Neutrokine-alpha
                                                                                                                                                                                                                                                                                                                                                                                    9

BLyS binding peptides bind BLyS or BLyS-like proteins reversibly or irreversibly. The binding peptides are used in detection, isolation and/or purification of BLyS in a solution such as water or a buffer solution, as well as any fluid and/or cell obtained from an individual biological fluid, body tissue, body cell, cell line, tissue culture or other source containing BLyS or BLyS-like polypeptides. The biological fluids include sera, plasma, lymph, blood, blood fraction, urine, synovial fluid, spinal fluid, saliva and mucous. Sequences ABG33578 and ABG33579 represent murine B Lymphocyte Stimulator proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               44 SFTAMSLYQLAALQADLMNLRMELQSYRGSATPAAA------KLLTPAAPRPHNSSR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression administered to treat diseases associated with aberrant BLyS expression diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (CVID) and control of the con

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a new antibody, or portion, that specifically binds to a protein which has a 285 or 250 amino acid sequence as fully defined in the specification. The antibody of the invention is useful in treating a disease or disorder such as cancer, especially B-cell cancer, autoimmune diseases such as Sjogre's carporate in the specification. The antibodie and cancer, autoimmune diseases such as Sjogre's syndrome, systemic lupus erythemateous, rheumatoid arthritis, chronic lymphocytic leukaemia, multiple myeloma, Hodgkin's lymphoma, non-Hodgkin's lymphoma or hypergammaglobulinemia, or in diagnosing a con-Hodgkin's lymphoma or hypergammaglobulinemia, or in diagnosing a cand APRIL (a proliferation-inducing ligand) in cells or body fluids using antibodies and comparing the Neutrokine-alpha and APRIL expression level with a standard Neutrokine-alpha and APRIL expression level increase or decrease in the assayed Neutrokine-alpha and APRIL expression level increase or decrease in the assayed Neutrokine-alpha and APRIL expression level disorder. The present anno acid sequence represents the mouse
Mouse; Neutrokine-alpha-like; antibody; immunogen; B-cell cancer; autoimmune disease; Sjogre's syndrome; systemic lupus erythematosus; rheumatoid arthritis; chronic lymphocytic leukaemia; multiple myeloma; Hodgkin's lymphoma; non-Hodgkin's lymphoma; hypergammaglobulinemia; APRIL; a proliferation-inducing ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    An isolated antibody or portion that specifically binds to a protein useful in the treatment of diseases such as hypergammaglobulinemia and
                                                                                                                                                                                                                                                                                                                                                             Mouse Neutrokine-alpha-like protein fragment #1

The invention relates to a composition (1) comprising AGP-3 receptor attached to a vehicle protein. (1) is useful for modulating AGP-3-related activity in mesonteric lymph nodes (MiN) of a mammal. (11) is useful in assays to identify cells and tissues that express AGP-3R or proteins related to AGP-3R-related protein and for identifying compounds (agonists or antagonists) that interact with AGP-3R proteins. (11) is also useful for identifying intracellular proteins that interact with AGP-3R proteins. (11) is also useful for identifying intracellular proteins that interact with process. (11) is involved in B cell growth, survival and activation particularly in lymph node, spleen, and Peyer's patches. AGP-3R caponists and are used to treat diseases characterised by inflammatory processes or deregulated immune response such as cells mich are derived from B cells, which involves treating the hybridoma cells with (11). (11) is useful in the production of hybridoma cells with (11). (11) is useful in the treatment of inflammatory conditions of joines, e.g., rheumatoid arthritis, osteoarthritis, etc. (11), its agonises or antagonises are useful for treating acute conditions of joines, e.g., rheumatoid arthritis, osteoarthritis, etc. (11), its agonises or antagonises are useful for treating acute (11), its agonises or antagonises are useful for treating acute (11), its alonises or antagonises are useful for treating acute (11), its alonises or antagonises are useful for treating acute (11), its alonises or antagonises are useful for treating acute (11), its alonises or antagonises are useful for treating acute (11), its alonises or antagonises are useful for treating acute (11), its alonises or antagonises are useful for treating acute (11), its alonises or antagonises are useful for treating acute (11), its alonises or antagonises are useful for treating acute (11), its alonises or antagonises are useful for treating acute (11), its alonises or antagonises are useful for treating acute (11), its alonises or antagonises 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       137

SFTAMSLYQLAALQADLMNLRMELQSYRGSATPAAAGAPELTAGVXLLTPAAPRPHNSSR 120 SFTAMSLYQLAALQADLMNLRMELQSYRGSATPAAA-----KLLTPAAPRPHNSSR 94 The present sequence encodes a murine AGP-3 polypeptide. AGP-3 is a tumour necrosis factor (TNF) ligand family member. AGP-3 is a type II transmembrane protein, and is a potent B cell stimulatory factor.

Expression of AGP-3 correlates to increases in the number of B cells and immunoglobulins produced. AGP-3 proteins, antibodies, and nucleic acids may be used to treat inflammatory and immune disorders, or rheumatoid arthritis, Crohn's disease, lupus and graft versus host disease. The nucleic acids may be used to regulate the expression of an AGP-3 related protein. The AGP-3 proteins, antibodies and nucleic and are also useful for the detection of AGP-3 agonists, antagonists and characterizing interactions with AGP-3 related proteins.

note: this sequence is not specifically claimed. It is only mentioned in the claims, in that a polypeptide that does not comprise the present 1 MDESAKTLPPPCLCFCSEKGEDMKVGYDPITPQKEEGAWFGICRDGRLLAATLLLALLSS Gaps 17; 21; Length 309; Score 1097.5; DB 21 Pred. ```
This invention describes isolated Tumor Necrosis Factor (TNF) family receptor polypeptides: APD4, APD6, APD8 and APD9 or their active fragments, and isolated TNF related ligands in and 3 (TNRL1 and TNRL3) or their active fragments. APD4 is useful for diagnosing prostate cancer by determining levels of APD4 in an individual. Prostate cancer can also be treated using APD4 selective binding agents linked to a therapeutic moiety. APD4 polypeptides are also useful for identifying selective binding agents, useful in diagnosis/treatment of disease by binding of agents to the polypeptides/active fragment which is extracellular, or expressed on the cell surface. The binding is preferably performed in vivo. APD4 polypeptides/ active fragments are also useful for screening for agonists and antagonists by binding and observing the changer in APD4 crivity. Effective pharmacological agents useful in diagnosis or treatment of disease are also identified using APD4 polypeptides/active fragments and APD4 signal transducer molecules that specifically interact with a cytoplasmic domain of APD4 and detecting a change in level of APD4 are all useful as immunogens for preparing antibodies. APD4 is also

Pharmaceutical compositions containing the Kay-ligand can be used to suppress or stimulate the immune system, especially to prevent or reduce the severity of autoimmune diseases or response to a tissue graft or to treat cancer. An agent capable of interfering with the Kay-ligand can be used to induce cell death. The Kay-ligand can also be used to identify

The present invention relates to an isolated heteromeric ligand of tumour necrosis factor (TNF)-family, referred to as APBF comprising a TNF-family member APRIL subunit linked non-covalently to TNF-family member APRIL subunit linked non-covalently to TNF-family member BAFF subunit. APBF is useful for diagnosis or treatment of various immune system-related disorders in mammals, preferably humans. Such disorders include cancer, including cellular disorders, for e.g. renal cell cancer, Kaposi's sarcoma, chronic leukaemia, breast cancer, colon cancer, bladder cancer, squamous cell carcinoma and cantoninestinal or stomach cancer, throat cancer, melanoma, colon cancer, bladder cancer, squamous cellular hyperproliferative conditions, such as scleroderma, pannus formation in rheumatoid arthritis, postsurgical scarring and lung, liver and uterine fibrosis and immunodeficiencies, inflammatory diseases, lymphadenopathy, autoimmune diseases and graft versus host disease. APBF is also useful for producing monoclonal or polyclonal antibodies and for identifying converse included and preceptors interacting converse interacting and medulators affecting bloogical function and receptors interacting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                178

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      specifically binds to a 285 residue neutrokine-alpha protein sequence or a 250 residue APRIL (proliferation inducing ligand) polypeptide sequence (S2). Also included are: (1) an antibody or its portion that competitively inhibits the specific binding of (1) by at least 50 or 90 %; (2) a nucleic acid encoding the antibody (1) (or its single chain); (3) a vector comprising the nucleic acid, (4) a host cell comprising the nucleic acid, (4) a host cell comprising the nucleic acid or vector; and (5) a hybridoma producing the antibody. The antibody is useful for treating disease or disorder such as autoimmune diseases, systemic lugues erythematosus; rheumatoid arthritis, Sjogren's syndrome, cancer, preferably B cell cancer, chronic lymphocytic leukaemia, multiple myeloma, Hodgkin's lymphoma and non-Hodgkin's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated antibody (I) or its portion that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antibody that binds to neutrokine-alpha protein, useful for diagnosing and treating diseases or disorders, such as autoimmune diseases, lupus erythematosus, rheumatoid arthritis, cancer, or an immunodeficiency -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ullrich S;

lymphocyte stimulator (BLyS), BLyS receptor expression or activity; cells of haematopoietic origin; or proliferative disease; and reducing, inhibiting or stimulating immunoglobulin production, B cell proliferation and graft rejection involving administration of BLyS binding polypeptides are used in the treatment, prevention or amelioration of diseases such as immune system diseases, proliferative diseases of cells of hematopoietic origin, graft rejection, allergies, infectious diseases, arteriosclerosis, inflammatory disorders, hypergammaglobulinaemia, blood clotting disorders, ischaemia, and metrodegenerative diseases. The present sequence is a B lymphocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; antirheumatic; antiALDS; vaccine; cancer; immune; autoimmune disorder; immunodeficiency; systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS; common variable immunodeficiency; acquired immunodeficiency syndrome.

Limpulcate Standlator (BLyS) polygeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell tumour necrosis factor (TNF) super family and induces B cell tumour necrosis factor (TNF) super family and induces B cell tumour necrosis factor (TNF) super family and induces B cell tumour necrosis factor (TNF) super family and induces B cell tumour neutron and differentiation. The antibodies of the irrention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). The invention relates to a B Lymphocyte Stimulator (BLyS) binding polypeptide. BLyS binding peptides bind BLyS or BLyS-like proteins reversibly. The binding peptides are used in detection, isolation and/or purification of BLyS in a solution such as water or a buffer solution, as wail as any fluid and/or cell obtained from an individual biological fluid, body tissue, body cell, cell line, tissue outlure or other source containing BLyS or BLyS-like polypeptides. The biological fluids include sera, plasma, lymph, blood, blood fraction, urine, synovial fluid, spinal fluid, saliva and muccuus. Sequences ABG33578 and ABG33579 represent murine B Lymphocyte Stimulator proteins.
                                                                                                                                                                                                                                                                                                                                                                                             New B-lymphocyte stimulator binding polypeptide useful in detecting or isolating BLyS or BLyS-like polypeptide comprises a specified amino acid sequence.
                                                                                                                                                                                                                                          Ladner RC;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 39,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                  1204

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1, Application US/09496118B
Patent No. 647596
GENERAL INFORMATION:
APPLICANT: Aggarwal, Bharat B.
TITLE OF INVENTION: Uses of THANK, a TNF homologue that Activates
TITLE OF INVENTION: Apoptosis
FILE REPRENCE: D6206
CURRENT APPLICATION NUBER: US/09/496,118B
